Botanical or Species Tulips and Their Hybrids

The following collection of Botanical Tulips includes a great number of beautiful and interesting varieties, which show a bewildering variation of size and shape of flowers, structure of leaves, habits, etc. The only thing they have in common is the fact that they grow wild in some parts of the world—Asia Minor, Central Asia, Greece, the Mediterranean. Cultivation has not modified them and they may be planted in the rock garden between creeping plants or in colonies in small, warm nooks, a situation where the larger-flowered garden Tulips would be out of place. Blooming period April 1 to late May.

Acuminata. Yellow, streaked red; very narrow petals tapering to a thin point at the tip. A peculiar but very attractive flower which always draws attention. 15 in. \$1.40 for 10; \$12.00 per 100.

Fosteriana, Red Emperor (Mme. Lefebvre). A glorious scarlet-red Tulip of remarkable size and substance; large black center with a yellow border. May be forced in mid-February. Flowering at the same time as Narcissus, it should be planted with or between them. 18 in. \$1.50 for 10; \$13.00 per 100.

To get the most beautiful effects from your Daffodils, we advise planting them in groups or clumps rather than in stiff rows. If possible, choose a location where they will have a pleasing frame or background—for instance, in front of a dark evergreen or hedge. Here their gay yellow, white and orange blooms will stand out wonderfully. Consider, too, the other spring bulbs and

plants that will make good companions for Daffodils. Among the best are grape hyacinths, scillas and pansies; planted as a "picture," these will produce an unforgettable sight, especially if spring-flowering shrubs are also part of the composition. In all garden making, it is best to consider the setting and the neighboring plants rather than just one plant at a time.

Daffodils and Narcissus

The beauty of Daffodils and Narcissi is unquestioned, and these flowers now form a leading feature in almost every spring garden. Every gardener should realize the enormous amount of pleasure that can so easily be obtained from growing them.

Revision of the Classification of Daffodils. In this catalog we have adopted the revised system for the new R.H.S. classification of Daffodils and Narcissi formally approved by the General Bulb Growers Society of Haarlem (Holland) and the Daffodil Societies of America, Canada, Australia, Tasmania and New Zealand.

The whole Genus is now classified in eleven Divisions as follows:

- Ia. Yellow Trumpets.
- Ib. Bicolor Trumpets.
- Ic. White Trumpets.
- IIa. Large-Cupped, yellow perianth, colored cup or corona.
- IIb. Large-Cupped, white perianth, colored cup or corona.
- IIc. Large-Cupped, white perianth, white cup or corona.
- IIId. Large-Cupped, not falling in a, b, or c.
- IIIa. Small-Cupped, yellow perianth, colored cup or corona.
- IIIb. Small-Cupped, white perianth, colored cup or corona.
- IIIc. Small-Cupped, white perianth, white cup or corona.
- IIId. Small-Cupped, not falling in a, b, or c.
- IV. Double Varieties.
- V. Triandrus Narcissi.
- VI. Cyclamineus Narcissi.
- VII. Jonquilla Narcissi.
- VIII. Tazetta Hybrids (Poetaz, etc.).
- IX. Poeticus Narcissi.
- X. Species and Wild Forms and Hybrids.
- XI. Miscellaneous Narcissi not falling into any of the foregoing Divisions.

New bulbs are rarely ready before late September. Plant as early as possible for best results, although late planting is satisfactory. All varieties are hardy; in northern climates a mulch is assurance against freezing.

Plant bulbs so that tip is covered 3 to 4 inches. Use bonemeal or superphosphate, avoid all manures when planting, and top-dress the plantings in early March with commercial fertilizer. For long stems water the beds copiously whenever possible.

For naturalizing effects plant bulbs irregularly. Cast the bulbs and plant in the position that they have fallen.

Bulbs and Perennials in the Border

Greater use should be made of bulbs and perennials in hardy borders. They are inexpensive and should be considered from the standpoint of ease of culture, color and succession of bloom. By careful selection it is possible to secure a sequence of bloom lasting through the entire season.

Plant perennials in clumps of three or more of the same variety and bulbs in groups of 10 or more of a variety. Too much stress cannot be laid on this point. Do not scatter your plants or bulbs, but rather keep those of a variety together.

The simple planting chart above shows average planting depths and spacing for hardy bulbs. In cases when you have a light, friable soil, Tulip bulbs may be planted deeper, so that they will give more years of bloom before they need be divided.

After blooming, bulbs should be left undisturbed until the foliage has turned yellow. It is not necessary to dig bulbs up after blooming.

A good application of coarse bonemeal is beneficial when applied to soil before planting in the fall. Sacco Plant Food (4-12-4), when applied in the spring after bulbs have grown 2 to 3 inches, will encourage a stronger stem and larger, brighter flower.

Contains special soluble forms of vital food elements that are readily absorbed through the leaves of living plants. Nitrogen 15%; phosphoric acid, 30%; potash 15%. 1½ lbs. \$2.25.

A new synthetic organic chemical (a finely ground, grayish white powder) which can be mixed with the soil to improve its structure. A substitute for natural humus, such as manure, peat and compost, which is scarce in silt and clay soils of poor structure. 2 to 5 pounds of Krilium should be well mixed with the top 3 to 6 inches of soil per 1000 square feet. 5 lbs. \$6.95.

Mysterious loss of bulbs? It is most likely due to an underground attack of insects and harmful bacteria. For comprehensive protection of the entire plant, including roots as well as foliage, Botonone has proved most effective. Soak bulbs in double strength Botonone solution (one ounce to the gallon) for an hour before planting. Pt. \$2.00; gal. \$12.00.

Use when preparing soil for bulbs. 10 lbs. \$1.00; 25 lbs. \$2.25; 50 lbs. \$4.25; 100 lbs. \$8.00.

The finest of fertilizers, a combined soil rectifier and growth producer for use on lawns, shrubs, flowers, trees, potted plants and vegetables. Buy it; try it. 25-lb. bag \$1.50; 50-lb. bag \$2.75; 100-lb. bag \$4.25.

Ideal as a mulch for all sorts of bulbs and plants during the winter as well as summer. The pore structure of Terra-Lite prevents this medium from becoming saturated; it never mats down or becomes soggy. It withstands wide variations in winter temperature. French's SPECIAL LAWN GRASS MIXTURES

Good seed is essential. Our mixtures contain only the finest natural grasses, selected for PURITY and HIGH GERMINATION

Fertilizers Are Needed to Make Lawns Grow

Fine lawn grasses require rich soil in which to do their best. When properly fed, they will grow so luxuriantly as to crowd out weeds. Grass that is constantly cut makes a heavy drain on the food content of soil, and unless this is annually renewed, a lawn will deteriorate.

French's Special Lawn Grass Mixtures

FRENCH'S "BEST" LAWN GRASS. Great care has been used in formulating this fine mixture, composed of fine-leaved, deep-rooting viable turf grass seeds. It contains only Kentucky Bluegrass, Certified Colonial Bent, and Chewing's Fescue, producing a permanent and superior deep green velvety turf. Will withstand heat, drought, and hard winters. 25 lbs. \$45.00; 50 lbs. \$80.00; 100 lbs. \$150.00.

FRENCH'S SUPER LAWN GRASS. An excellent mixture for making a permanent lawn in fertile soil. It contains a high percentage of Colonial Bent and Kentucky Bluegrass in combination with other permanent grasses. 25 lbs. \$35.00; 50 lbs. \$65.00; 100 lbs. \$125.00.

FRENCH'S SPECIAL EVERGREEN LAWN GRASS. Thrives under a wide variety of soil and weather conditions and produces beautiful velvety lawns. A favorite of hundreds. 25 lbs. \$30.00; 50 lbs. \$55.00; 100 lbs. \$100.00.

FRENCH'S SHADY LAWN GRASS. A carefully prepared mixture to be grown in shady spots. This mixture consists of the highest grade of re-cleaned seeds and should make a good lawn in places where it is hard to grow grass because of shade. 25 lbs. \$32.50; 50 lbs. \$58.00; 100 lbs. \$110.00.

Separate Varieties of Grasses and Clovers

BLUE GRASS, KENTUCKY. This is suited to a variety of soils and is largely used for lawns and as a pasture grass. It is unusually early and presents a beautiful green appearance in early spring when other grasses are still dormant. Sow 60 pounds to the acre. 10 lbs. \$12.00; 25 lbs. \$27.50; 50 lbs. \$52.50; 100 lbs. \$100.00.

WHITE DUTCH CLOVER SEED. Excellent for use on lawns; forms a close herbage and remains green throughout the season. We furnish the choicest grade of seed. Lb. \$1.75; 5 lbs. \$8.50; 10 lbs. \$16.75; 25 lbs. \$32.50.
